

## Summary of JPIJ 2.0 Changes Proposed

### Items from GITA changes to the PIJ that took effect July 1, 2010

- Renamed individual sections to match and organized paragraphs within individual sections in GITA's order.
- Recombined some existing paragraphs into a new Project Approach section.
- Broke out standards compliance items into a separate section (Policies, Standards & Procedures) and added several related questions.
- Combined the three separate cost tables (Development, Operating, Total) into a single composite table that uses an embedded Excel spreadsheet.
- Added individual criteria and scoring column to both project benefits tables.
- Removed FTE and ERE position numbers and costs from the financial tables, in keeping with GITA's changes, and moved FTE information to its own dedicated subsection.
- Removed funding timeline table.
- Streamlined multiple pages of risk questions into a single table with objective criteria for scoring.
- Added Key Management Information checklist in approvals section.

### GITA PIJ changes not made in JPIJ 2.0 update

- Did not break the document into two parts to make distinction between pre-approval and formal final approval processes.
- Did not add GITA's special terms and conditions used to track ARRA/stimulus funding requirements imposed by the federal government.
- Did not add GITA's questions about service oriented architecture and notice of intent for web development projects (both executive branch initiatives).

### CACC requested changes made in JPIJ 2.0 update

- In line with CACC's focus on coordination, added Project Dependencies section to bring to light business deliverables in other projects this project relies on as well as business deliverables from this project that other projects are relying on.
